

Highlights: 2009 BC Wage & Salary Survey

About the survey

The BC Wage & Salary Survey collected information on wages, hours of work, and skills shortages for more than one hundred of the province's most common occupations. This project was undertaken in partnership with the Ministry of Advanced Education and Labour Market Development (ALMD). Funding was made possible through the Labour Market Information initiative under the Canada-British Columbia Labour Market Agreement (LMA), which is administered for B.C. by ALMD.

The survey, conducted on behalf of BC Stats and ALMD by Statistics Canada, was completed by a sample of B.C. establishments between March 23rd and June 25th, 2009. Establishments having 10 or more employees were selected for the survey sample from Statistics Canada's Business Register. The sample was designed to target the most common jobs in each of B.C.'s development regions.¹ In each of the province's three largest regions (Vancouver Island/Coast, Mainland/Southwest, and Thompson-Okanagan), 100 occupations were targeted, and in each of the five smaller regions (Kootenay, Cariboo, North Coast, Nechako, and North East), 35 occupations were targeted.

Information on wages, salaries, and hours of work was collected separately for part-time and full-time employees. Estimates of hiring difficulties and vacancies are based on the

¹ Common occupations are those that employed the largest number of persons at the time of the 2006 Census.

BC Wage & Salary Website

Additional information about the survey can be found on the BC Wage & Salary website: <http://www.bcstats.gov.bc.ca/data/lss/labour/wage>

This website allows users to generate reports for specific occupations by region. Users can search for occupations alphabetically, by keyword, by occupation code (NOC), by salary range, or by region.

The website also includes: a complete listing of occupation and region-specific data availability; additional analysis documents; the survey methodology report; and links to other useful websites.

percentage of employers surveyed in that occupation.

In total, the survey provides information on 112 occupations. By aggregating regional results, BC Stats has provincial estimates of full-time wages, hours of work, hiring difficulties, and vacancies for 91 occupations. This article highlights the provincial results for these 91 jobs. (The occupations examined in this article are listed in the table beginning on page 7.)

Produced in partnership with the Ministry of Advanced Education and Labour Market Development

Labour Market Development

BCStats

Most frequent wage rates

In the survey, businesses were asked to report the average (defined as the most often or most frequent) wage paid to employees in each occupation.² Most frequent hourly wage rates for full-time employees ranged from a low of \$10 per hour (food and beverage servers) to a high of \$61 (senior managers—financial, communications and other business services).³

The most highly paid occupations required significant education or experience

Occupation	Most frequent full-time wage
Senior Managers - Financial, Communications and Other Business Services	\$61.30*
Financial Managers	\$40.55
Senior Managers - Goods Production, Utilities, Transportation and Construction	\$39.49
Business Development Officers and Marketing Researchers and Consultants	\$37.91
Civil Engineers	\$37.47
Professional Occupations in Business Services to Management	\$36.73
Registered Nurses	\$36.59
Sales, Marketing and Advertising Managers	\$36.54
Insurance, Real Estate and Financial Brokerage Managers	\$36.32
Senior Managers - Trade, Broadcasting and Other Services, n.e.c.	\$35.10

*Data should be interpreted with caution.

Source: BC Stats & Statistics Canada, 2009 BC Wage & Salary Survey

The ten most highly paid occupations surveyed all required significant skills and experience –

² Wages and salaries do not include overtime hours, tips, benefits, profit shares, bonuses (unrelated to production), and other forms of compensation.

³ The occupation codes and titles used in this survey are based on the National Occupational Classification (NOC) framework, which is maintained and updated by Human Resources and Skills Development Canada (HRSDC). For detailed occupational descriptions, visit: <http://www.hrsdc.gc.ca/noc>

some were management positions, and others required a university degree or equivalent.

In contrast, the ten lowest paid occupations surveyed typically required minimal skills or experience, most requiring only a high school education or on-the-job training. Cooks and bakers stood out as the lowest-paying occupations where employees may require college education.

The lowest paid occupations typically required minimal skills or experience

Occupation	Most frequent full-time wage
Food and Beverage Servers	\$10.15
Sewing Machine Operators	\$10.58
Food Counter Attendants, Kitchen Helpers and Related Occupations	\$10.87
Nursery and Greenhouse Workers	\$11.20
Cashiers	\$11.51
Security Guards and Related Occupations	\$12.11
Grocery Clerks and Store Shelf Stockers	\$12.65
General Farm Workers	\$12.93
Cooks	\$13.19
Bakers	\$13.30

Source: BC Stats & Statistics Canada, 2009 BC Wage & Salary Survey

Starting wage rates

Employers were asked to provide the base (starting) wage for employees in each occupational group. Starting wage rates ranged from a low of \$9 per hour (sewing machine operators) to a high of \$49 (senior managers—financial, communications and other business services). In some occupations, the starting wage was significantly lower than the most frequent wage, with starting wage rates 30 to 40% lower than most frequent wage rates. For example, the starting wage for electricians (\$16) was 40% lower than the most frequent wage for this occupation (\$27).

Starting wages for electricians were 40% below the occupational average

Occupation	Starting wage (vs. most freq.)
Post-Secondary Teaching and Research Assistants	-45.8%*
Electricians (Except Industrial and Power System)	-40.3%
Civil Engineers	-35.4%
Painters and Decorators	-33.2%
Insurance Agents and Brokers	-32.4%

*Data should be interpreted with caution.

Source: BC Stats & Statistics Canada, 2009 BC Wage & Salary Survey

In other occupations, the starting wage was virtually identical to the most frequent wage. For example, starting wage rates among elementary and secondary school teaching assistants and nurse aids, orderlies, and patient services associates were less than 1% below most frequent wage rates in these occupations.

Most frequent and starting wages are about the same for occupations such as data entry clerks

Occupation	Starting wage (vs. most freq.)
Elementary and Secondary School Teacher Assistants	-0.8%
Nurse Aides, Orderlies and Patient Service Associates	-0.9%
Computer and Information Systems Managers	-2.0%
Data Entry Clerks	-2.6%
Banking, Insurance and Other Financial Clerks	-3.8%

Source: BC Stats & Statistics Canada, 2009 BC Wage & Salary Survey

Maximum wage rates

Employers were also asked to provide the maximum wage paid to employees in the surveyed occupations. Maximum wages, by occupation, ranged from \$11 per hour (food and beverage servers) to \$77 (senior managers—financial, communications and other business services). In some occupations, there was considerable variability in wages among employees, and some employees earned

significantly more than others. For example, the highest paid-civil engineers earned almost twice as much (92% more) as the most frequent wage for that profession.

Highly paid civil engineers earned almost twice the occupational average

Occupation	Max. wage vs. most freq.)
Post-Secondary Teaching and Research Assistants	93.1%
Civil Engineers	91.8%
Senior Managers - Trade, Broadcasting and Other Services, n.e.c.	51.9%
Sales Representatives - Wholesale Trade (Non-Technical)	50.4%
Hairstylists and Barbers	50.1%

Source: BC Stats & Statistics Canada, 2009 BC Wage & Salary Survey

In many occupations, however, wages did not vary as much across employees, and the maximum wage was only slightly above the most frequent wage. For example, the maximum wage among construction millwrights and industrial mechanics was only 1% higher than the most frequent wage in this occupation.

The maximum wage for construction millwrights was only slightly higher than the most frequent wage

Occupation	Max. wage vs. most freq.)
Construction Millwrights and Industrial Mechanics (Except Textile)	1.2%
Painters and Decorators	1.7%
Business Development Officers and Marketing Researchers and Consultants	3.8%
Accommodation Service Managers	4.3%
Nurse Aides, Orderlies and Patient Service Associates	4.7%

Source: BC Stats & Statistics Canada, 2009 BC Wage & Salary Survey

Hours of work

In the survey, full-time employment was defined as persons working 30 hours or more

per week. In the majority of occupations surveyed, full-time employees worked, on average, 40 or fewer hours per week. There were some exceptions, however, particularly among management occupations and occupations specific to the primary industry. The two occupations in which employees worked the longest hours were: logging machinery operators (51 hours per week) and senior managers—goods production, utilities, transportation and construction (46 hours).

Full-time logging machinery operators worked more than 50 hours per week

Occupation	Average full-time hours
Logging Machinery Operators	50.5
Senior Managers - Goods Production, Utilities, Transportation and Construction	45.5
Visiting Homemakers, Housekeepers and Related Occupations	44.9
Nursery and Greenhouse Workers	44.6
Accommodation Service Managers	44.2
Farmers and Farm Managers	43.9
Construction Managers	43.8
Heavy Equipment Operators (Except Crane)	43.3
Truck Drivers	43.1
Professional Occupations in Business Services to Management	43.0

Source: BC Stats & Statistics Canada, 2009 BC Wage & Salary Survey

Although elementary and secondary school teacher assistants had the shortest full-time hours, this may be a reflection of the threshold used to distinguish full-time and part-time employment. Full-time work weeks were relatively short (fewer than 37 hours per week) among employees in occupations such as: food and beverage servers; nurse aides, orderlies, and patient service associates; and other assisting occupations in support of health services.

Among the 10 occupations with shortest work weeks, most still worked 35 hours or more

Occupation	Average full-time hours
Elementary and Secondary School Teacher Assistants	31.0
Food and Beverage Servers	34.6
Other Assisting Occupations in Support of Health Services	34.8
Nurse Aides, Orderlies and Patient Service Associates	36.0
Other Instructors	36.0
Estheticians, Electrologists and Related Occupations	36.2
Food Counter Attendants, Kitchen Helpers and Related Occupations	36.2
Information Systems Analysts and Consultants	36.5
Community and Social Service Workers	36.6
Light Duty Cleaners	36.6

Source: BC Stats & Statistics Canada, 2009 BC Wage & Salary Survey

Full-time vs. part-time employment

In most occupations, full-time employment is more prevalent than part-time employment, but in some occupations, it's the reverse. In over half of the occupations surveyed, full-time employment represented 90% or more of total reported employment for that occupation. In some occupations, particularly among management occupations, part-time employment comprised zero or less than one percent of total reported employment. However, it is important to keep in mind that the survey sample only included businesses with 10 employees or more, and part-time employment may be more common in smaller establishments.

In many management occupations, virtually all employment was full-time

Occupation	% Employed full-time
Insurance, Real Estate and Financial Brokerage Managers	100.0%
Software Engineers and Designers	100.0%
Computer and Information Systems Managers	100.0%
Painters and Decorators	100.0%
Professional Occupations in Business Services to Management	100.0%
Plumbers	99.8%
Construction Managers	99.7%
Manufacturing Managers	99.6%
Senior Managers - Goods Production, Utilities, Transportation and Construction	99.6%
Restaurant and Food Service Managers	99.5%

Source: BC Stats & Statistics Canada, 2009 BC Wage & Salary Survey

In a small number of occupations, full-time employment represented less than half of total reported employment. Part-time employment was more prevalent among post-secondary teaching and research assistants, visiting homemakers, housekeepers and related occupations, and various sales and service occupations.

Teaching assistants were among those least likely to be employed full-time

Occupation	% Employed full-time
Post-Secondary Teaching and Research Assistants	10.3%
Visiting Homemakers, Housekeepers and Related Occupations	11.0%
Other Instructors	19.0%
Food and Beverage Servers	32.1%
Food Counter Attendants, Kitchen Helpers and Related Occupations	33.9%
Other Assisting Occupations in Support of Health Services	35.3%
Program Leaders and Instructors in Recreation, Sport and Fitness	35.4%
Elementary and Secondary School Teacher Assistants	37.4%
Cashiers	43.3%
Grocery Clerks and Store Shelf Stockers	46.2%

Source: BC Stats & Statistics Canada, 2009 BC Wage & Salary Survey

Hiring difficulties

Businesses were also asked to report whether or not they had experienced hiring difficulties for each occupation, if they had recruited for that occupation in the last two years. Across occupations, the proportion of employers reporting hiring difficulties was as high as 46% (hairstylists and barbers). In more than two-thirds of the occupations surveyed, less than 10% of employers reported hiring difficulties. It is important to note, however, that failure to report hiring difficulties may indicate that employers did not recruit for the specified occupation in the past two years. Some of the occupations where employers were the most likely to report hiring difficulties were high-skilled occupations (e.g., insurance agents and brokers), while others were relatively low-skilled occupations (e.g. security guards and related occupations).⁴

Occupations where employers were most likely to report hiring difficulties required various skill levels

Occupation	Hiring difficulties
Hairstylists and Barbers	45.5%*
Estheticians, Electrologists and Related Occupations	29.4%
Other Instructors	25.8%
Bus Drivers, Subway Operators and Other Transit Operators	24.8%
Nursery and Greenhouse Workers	24.3%*
Security Guards and Related Occupations	22.1%
General Farm Workers	21.6%
Insurance Agents and Brokers	20.1%
Community and Social Service Workers	18.8%
Cooks	17.7%

Note: Percentage based on number of employers reporting hiring difficulties if recruited in past two years

*Data should be interpreted with caution.

Source: BC Stats & Statistics Canada, 2009 BC Wage & Salary Survey

⁴ High skilled jobs are defined as those typically requiring university or college education, or skilled apprenticeship, as defined by the NOC framework.

Vacancies

Employers were asked to report whether or not they had any vacancies in that occupation that had been unfilled for longer than four months. The proportion of employers reporting vacancies of over four months varied quite widely among occupations, with more than half of employers reporting vacancies in some occupations. Many of the occupations where employers were most likely to report vacancies required a college education (e.g. electricians, cooks, early childhood educators and assistants), although some required minimal education or training (e.g. labourers in food, beverage and tobacco processing).

In some occupations, more than half of employers reported vacancies unfilled for longer than 4 months

Occupation	Vacancies >4 months
Electricians (Except Industrial and Power System)	62.8%*
Bus Drivers, Subway Operators and Other Transit Operators	55.8%
Other Instructors	55.1%
Cooks	51.6%
Community and Social Service Workers	50.9%
Early Childhood Educators and Assistants	50.4%
Labourers in Food, Beverage and Tobacco Processing	50.4%
Insurance Agents and Brokers	49.8%
Estheticians, Electrologists and Related Occupations	48.4%*
Food Counter Attendants, Kitchen Helpers and Related Occupations	47.7%

Note: Percentage based on number of employers reporting vacancies unfilled for longer than four months

**Data should be interpreted with caution.*

Other sources of salary information for British Columbia

As noted above, the 2009 BC Wage & Salary Survey collected information on hourly wage rates, hours of work, and skills shortages for more than one hundred of the province's most common occupations. The BC Wage & Salary Survey was an employer survey, conducted with a sample of establishments between March 23 and June 25th, 2009.

Another source of labour market information is the 2006 Census, which covers all of the occupations in B.C.'s economy. The Census provides information on average annual employment income, hours of work, and industry mix for each of the province's occupations, and data is available for very small geographic areas. The Census is a self-completed survey, and labour force estimates refer to persons aged 15 and over who were either employed or unemployed during the week prior to Census Day (May 16, 2006).

Both the Census and the BC Wage & Salary Survey use the National Occupational Classification for Statistics coding system.
